METAL ZERØ

DETOX MASK

Definition

Hair mask formulated to provide intensive treatment that revitalises, strengthens and repairs the hair fibre from within. With Active Detox, an antioxidant that helps capture and eliminate heavy metals accumulated in the hair due to hard water and external factors, it helps prevent fibre degradation and protect natural and/or dyed colour, restoring a healthier and more balanced appearance to the hair.

Its combination of natural ingredients helps to strengthen the hair structure, improve elasticity and resistance, seal the cuticle and provide deep hydration. It also reduces frizz and static, makes styling easier and protects against external aggressions, leaving hair softer, shinier, more manageable and visibly revitalised.

Benefits of use and visible results

- Helps capture and remove heavy metals and residues from the hair.
- Protects the hair fibre from oxidation.
- Helps strengthen the internal structure of the hair.
- Helps improve resistance and reduce breakage.
- Improves hair elasticity and flexibility.
- Helps repair and seal the hair cuticle.
- Helps moisturize the hair.
- Helps improve the shine and softness of the hair fibre.
- Eliminates frizz and makes hair easier to comb.

Active ingredients and components

ACTIVE DETOX: Biodegradable chelating agent. It is an antioxidant ingredient that helps capture and eliminate heavy metals, such as copper (Cu) and iron (Fe), which are deposited in the hair fibre due to hard water and external factors, such as pollution. This helps prevent degradation and protect the natural and/or dyed colour of the hair.

PLANT-BASED KERATIN: This is an alternative to animal-based keratin. This hydrolysate is composed of amino acids derived from wheat and soy, combined with other carefully selected amino acids. It offers numerous benefits for hair: it increases strength, improves elasticity, protects against external factors, and provides shine and a healthier appearance. It also makes hair easier to style and reduces static and frizz.

INULA: Of plant origin, Inula Maritima, also known as Sea Daisy or Maritime Daisy, one of its main components is glycolipids, which help to strengthen the cohesion of the hair's lipids, thus providing better protection and restructuring, and also helping to prevent oxidation and degradation of the hair bulb. It offers deep hydration, softness and shine, acting as a natural conditioner that reduces frizz and improves hair manageability by retaining moisture and smoothing the hair fibre.

OLIGOGELINE ALGAE: This is an extract from Chondus Crispus algae (carrageenan). It forms a continuous, uniform film on the hair. Its action is long-lasting, thanks to the mimetic action between hair proteins and carrageenans. It acts as a non-occlusive plasticiser. Thanks to its mineral composition, it stimulates hair keratinisation. It offers strengthening, moisturising and protective properties for the hair fibre.

ALARIANE ALGAE: The extract of this seaweed contains various vitamins, amino acids and minerals that mimic the composition of natural hair keratin, with antioxidant properties that help condition and maintain optimal moisture balance, revitalising the hair. This makes it stronger and less prone to breakage.

TSUBAKI OIL: A cosmetic hair elixir that deeply moisturises the hair, helps repair damage to the hair fibre and seals the cuticles, combats frizz and protects colour from external aggressions, thanks to its richness in Omega 9, Omega 6 and Vitamin E, leaving hair shinier, softer, stronger and more manageable.

NATURPEP AMARANTH: Offers multiple benefits in hair cosmetics, mainly strengthening the hair structure and improving texture and shine. It is particularly effective in treating fine or damaged hair problems.

Method of application

After washing your hair, apply the necessary amount to damp hair, depending on its length. Leave on for a few minutes and rinse thoroughly with water. For very damaged hair, leave on for longer. Do not use on children under 3 years of age.
